

The DPL Guide to **Funability**

Increasing personal fulfillment in software development teams

Leverage Your Leadership Roles

Identify your strong developer leads

Give your project managers the time and tools they need

Have a Design

Be consistent

Encapsulate volatility

Architect so the system runs on a developer's machine

Productivity Awareness

Protect developers' schedules

Give developers all they need to complete iterations

Enable engineers to run the full stack locally

Use a Layered Process Toward Quality

Run those unit tests...every day

Conduct code reviews

Always review your designs

Automate your UI tests

Continuous integration!
